

# Flupp 22ST

The Flupp 22ST is made of soft PVC based material and its mechanical properties are not altered under the influence of light oxygen and ozone, i.e. the non-rigid PVC material used for Flupp is non-ageing.

Non-rigid PVC is resistant to:

Saline Solutions  
Diluted Alkaline Solutions  
Soap Suds  
Amonia Water

It is also conditionally resistant to:

Detergents  
Sulphuric Acid – up to 40%  
Hydrochloric Acid – up to 35%  
Concentrated Caustic Soda Solution  
Concentrated Potash Lye  
Oil – mineral, vegetable and animal fats

However, when the Flupp is used in the usual way, and a mortar is used to seal the cone, materials such as those mentioned above do not come into direct contact with the Flupp.
